# IP BRICK®.IC

## Enterprise Communications

**IPBrick.IC is a Linux Operating System designed for Intranet and Communication servers. Focusing on email, collaborative tools as well as providing a firewall and a proxy for accessing the Internet, this system provides your company a secure and fully integrated communication experience. In fact, it is a high performance solution that enables the fastest and simplest installation, and configuration; coupled with a enterprise level disaster recovery. This provides a solution with a record breaking low Total Cost of Ownership**

IPBrick.I part of the solution manages your company's Intranet. It features email, file management, Windows domain support, printers and database servers. IPBrick.I integrates a truly collaborative environment with address book, diary and calendar. At the security level, it offers a backup service for the users work areas and the pre-installed awarded Kaspersky software, to protect your email and work area data from spam and malware.

IPBrick.C, part of the solution, provides a communication server to connect your enterprise to the outside world. This component enables you to configure mail relay, web-mail and professional chat. It also provides web server, web-phone and proxy http/ftp services. A full range of services are also pre-installed that protect your communications - Firewall, Intrusion Detection System, pre-installed proxy and email Anti-Virus as well as Anti-Spam. The VPN server gives you full remote access to your digital resources.

**Supported Hardware:** Asus, Dell, Fujitsu-Siemens, IBM, Intel, HP among others
